Vivi Teacher Tip:
Go Green with Screenshot

What is Go Green with Screenshot?

Students use the Screenshot feature to capture, save, and annotate on content that is projected on a Vivi connected screen to reference at a later time.

- Watch the Vivi "Screenshot" feature tutorial here.

Research Connections:

Go Green with Screenshot supports research-based instruction because it offers...

- Scaffolded supports by offering **differentiated pathways and materials**.
- More time for **knowledge activation and reflection** by focusing on annotating personalized notes rather than copying content.

Targeted and Relevant

Actively Engaging

Educator Tips & Tricks:

"[Go Green with Screenshot] makes a big difference to the running of my classes. My students have the ability to take a screenshot at any time. It's really helpful, especially once I start annotating on the screen."

Craig Nicholls
Director of Digital Learning

Start Small

- Ease students into Go Green with Screenshot by **having students start with screenshotting and saving**, then adding in annotation.

Try this strategy when...

- You want a **"green" alternative to worksheets**: Students screenshot digital copies of notes instead of engaging with a print-out.
- You want students to **devote their time to personalizing notes** and/or example problems you provide rather than copying the notes themselves.
- You want **scaffolded support** for learners who have auditory or visual processing differences.
